

Congratulations! Your purchase of the Creative Inventions Big Shaver puts the most versatile pool tool available right in your hands. The Big Shaver will make it a snap for you to replace and maintain your tip in perfect playing shape.

Please read these instructions *carefully* before starting. Take your time. We're confident you'll find the Big Shaver the perfect tool for all your tip care needs.

To remove old tip: With a sharp hobby knife or single-edged razor, remove old tip, taking care not to nick or damage the ferrule. Go slowly and carefully.

Lightly sand the face of the ferrule to remove any old tip material or glue. It's important to keep the ferrule face square to the shaft. Lightly sand the back of the replacement tip and apply a small amount of glue. (We find most glues work well, but prefer one of the "super glue"-type adhesives).

Carefully seat the new tip onto the face of the ferrule, swirl a bit to ensure complete glue coverage and clamp with a large rubber band. (See Illus.) Wipe any excess glue from the side of the ferrule and tip and set aside. For best results, allow to dry *overnight*.

**To finish new/
maintain existing tip:**

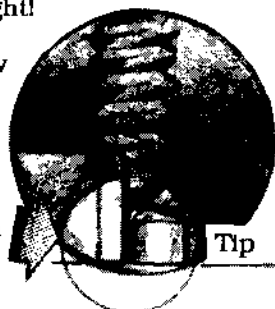

Loosen Tension Knob (A) and insert tip-end of shaft into shaver as shown. Adjust Stop Screw (B) until edge of blade is even with bottom of tip. Tighten tension knob (A) until tip is *just snug* against blade, never more than finger tight!

Tip

The Shaper is also *great* for *scuffing* old chalk from your tip, before re-chalking during play.

The Big Shaver is manufactured to provide years of defect-free service. It may be necessary to hone the blade from time to time. Just loosen set screw and slide blade from the Shaver body. Be very careful! The blade is extremely sharp.
